

# Note to Educators

**T**he Forest Service’s mission is to sustain the health, diversity, and productivity of the Nation’s forests and grasslands to meet the needs of present and future generations. For more than 100 years, our motto has been caring for the land and serving people. The Forest Service, U.S. Department of Agriculture (USDA), recognizes its responsibility to be engaged in efforts to connect youth to nature and to promote the development of science-based conservation education programs and materials nationwide.

The *Natural Inquirer* is a science education resource journal to be used by students in grades 5 and up. The *Natural Inquirer* contains articles describing environmental and natural resource research conducted by Forest Service scientists and their cooperators. These are scientific journal articles that have been reformatted to meet the needs of middle-school students. The articles are easy to understand, are aesthetically pleasing to the eye, contain glossaries, and include hands-on activities. The goal of the *Natural Inquirer* is to stimulate critical reading and thinking about scientific inquiry and investigation while teaching about ecology, the natural environment, and natural resources. In this edition of the *Natural Inquirer*, you will find five science articles about Hawai’i and one about the Federated States of Micronesia written in the scientific method format.

---

## The Format of a Natural Inquirer Article

Each *Natural Inquirer* article follows the same format. Each *Natural Inquirer* article is written directly from a published science article, and the scientist who wrote the scientific article has reviewed the *Natural Inquirer* article for accuracy. Each article contains the following sections, which you may introduce to your students as they read:

**Meet the Scientists:** Introduces students to the scientists who did the research. This section may be used in a discussion about careers in science.

**Thinking About Science:** Introduces something new about the scientific process, such as a scientific habit of mind or procedures used in scientific studies.

**Thinking About the Environment:** Introduces the environmental topic being addressed in the research.

**Introduction:** Introduces the problem or question being addressed by the research.

**Methods:** Describes the methods used by the scientists to collect and analyze their data.

**Findings:** Describes the results of the analysis.

**Discussion:** Discusses the findings and places them into the context of the original problem or question.

**Reflection Section:** Presents questions aimed at stimulating critical thinking about what has been read or predicting what might be presented in the next section. These are placed at the end of each of the main article sections.

**Number Crunches:** Presents an easy math problem related to the research.

**Glossary:** Defines potentially new scientific or other terms to students. The first occurrence of a glossary word is **bold** in the text. A Hawaiian glossary is also provided in this journal. This glossary will help you to correctly pronounce the Hawaiian words.

**Citation:** Gives the original article citation with a Web link to the original article.

**FACTivity:** Presents a hands-on activity that emphasizes something presented in the article.

## National Education Standards and Evaluations

In the back of the journal, you will find a matrix that enables you to identify articles by the National Science Education Standards and National Curriculum Standards for Social Studies that they address. Each article also contains a list of the standards addressed. Evaluation forms for both educators and students are available on our Web site. We welcome any feedback, so please visit <http://www.naturalinquirer.org> and complete the online evaluation forms. In addition, you may contact Dr. Barbara McDonald at the address below with any comments you have.
