

Natural Inquirer: Fall 1998 Edition
Who or What Am I Game

1. We are invertebrate organisms that have jointed bodies and limbs. Beetles, ants, and spiders are examples. What are we?

2. I can be found in a tree. Many animals use me for a home and to raise their babies. Woodpeckers make their home in me. What am I?

3. Many scientists use me in many types of research. I can be compared to an experimental treatment. What am I?

4. I am a fungus that produces leaf spots. I infect people's favorite tree in the south. Who am I?

5. Foresters use me to improve forest health. I can reduce chances for larger, uncontrolled forest fires. What am I?
