

Natural Inquirer Monograph: **Worming Their Way In**
Who or What Am I Game

1. I am a system. I am used to classify all living things. In my system, humans are named Homo sapiens. What am I?

2. I am nonnative to an area. I usually reproduce more quickly than the native species in an area because there is nothing that feeds on me. What am I?

3. I am designed to capture small insects and animals that crawl along the ground. In this study I was used to capture earthworms. I was placed in 20 different locations in north Georgia. What am I?

4. I am found on the ground. I am made up of bits of dead and decaying leaves, twigs, and sticks on the forest floor. Small animals and earthworms like to live in me. What am I?

5. I am native to Japan. However, in the early 1900's I was found in California. Scientists think that I was brought to the United States on plants and trees from Japan. Fisherman helped spread me. I am very aggressive and eat a lot of leaf litter. What am I?
