

National Science Education Standards

The National Science Education Standards (NSES) for all grade levels focuses heavily on science as inquiry and science and technology. Specifically, in grades 5-8, the content standard for science as inquiry states the following:

- “Content Standard A: As a result of activities in grades 5-8, all students should develop
 - o Abilities to do scientific inquiry
 - o Understandings about scientific inquiry”
- Fundamental abilities and concepts for the “abilities to do scientific inquiry” include
 - o Identifying questions that can be answered through scientific investigations
 - o Designing and conducting a scientific investigation
 - o Using appropriate tools and techniques to gather, analyze, and interpret data
 - o Developing descriptions, explanations, predictions, and models using evidence
 - o Thinking critically and logically to make relationships between evidence and explanations
 - o Recognizing and analyzing alternative explanations and predictions
 - o Communicating scientific procedures and explanations
 - o Using mathematics in all aspects of science inquiry
- Fundamental abilities and concepts for the “understandings about scientific inquiry” include
 - o Different kinds of questions suggest different kinds of scientific investigations
 - o Current scientific knowledge and understanding guide scientific investigations
 - o Scientific explanations emphasize evidence, have logically consistent arguments, and use scientific principles, models and theories
 - o Science advances through legitimate skepticism
 - o Scientific investigations sometimes result in new ideas and phenomena for study

(Excerpts from National Science Education Standards (1996), National Academy Press.)

The *Natural Inquirer* Scientific Process Module addresses all of the areas listed above, as well as some of the content standards depending on which articles and research topics are chosen.
